

BMI CALCULATOR

Sabari.M

Abstract

This BMI calculator is designed to provide a quick and easy way to estimate an individual's Body Mass Index (BMI) based on their height and weight. BMI is a widely used screening tool for assessing whether a person is underweight, normal weight, overweight, or obese, and it can help identify potential health risks associated with weight. By inputting height and weight values, users can obtain their BMI score and corresponding weight category, helping them make informed decisions about their health and wellness.
